

CATS ARE COOL 'CAUSE...

They walk
all over us.

Their wacky antics
make us smile.

Their motors keep
our laps warm.

They teach us
how to chill.

They butt heads with
us to show love.

CATS OFTEN HIDE THEIR ILLNESSES FROM US.

If your cat shows these signs,
contact your veterinarian.

- Changes in chewing, eating and drinking habits
- Drastic weight gain or loss
- Withdraws from social interaction or avoids touching
- Changes in activity level including sleeping more or hyperactivity
- Increased vocalization
- Increased urination and/or "accidents"
- Inability to urinate (emergency situation)
- Grooms less or excessively
- Acts out of character

CATS ARE COOLEST WHEN THEY'RE HEALTHY.

And while their behavior may be a mystery to us, their health shouldn't be. That's why Morris Animal Foundation (MAF) launched the Happy Healthy Cat Campaign – an unprecedented worldwide effort to promote feline health research and eliminate suffering and premature death of cats.

Please give in the name of a cat you love. To learn more about cat health and research and to support the campaign, visit www.research4cats.org.
